

AT THE EDGE

THE ART OF INVENTION

A very large historic Kodak camera is one of the creations of sculptor Daniel A. Henderson, a longtime friend of NJIT who's also a noted inventor and entrepreneur with 26 patents for innovative telecommunications technology to his credit. A six-foot telephone and comparably oversized radio and TV set from the middle of the twentieth century are among Henderson's creations as well. Henderson fashions his work from marble, a host of metals, wood and other materials. It is intended to inspire contemplation of technological creativity – and how key technological advances of the past hundred years have changed our lives in ways both positive and, possibly, negative.

Experience Henderson's art at the exhibit in the NJIT Campus Center Atrium that runs from October through December.
